

ABSTRACT OF THE DISCLOSURE

A convertible vehicle has a carbody and a retractable top connected to the carbody. A top compartment is provided in the carbody, wherein the retractable top in a folded-down position of the retractable top is stowed in the top compartment. A top compartment lid for closing the top compartment is provided, wherein the top compartment lid extends within a rear carbody contour of the carbody. A holding-down device is arranged between the top compartment lid and the retractable top, wherein the holding-down device in a holding-down position is placed onto the retractable top stowed in the top compartment when closing the top compartment lid. The holding-down device has a counter member pivotably supported on the top compartment lid and a support part that is movable jointly with the retractable top and is connectable to the counter member in the folded-down position of the retractable top.
